SUMMARY

Informatics student and Full Stack Developer with 1 year of experience building scalable web applications from the ground up. Expert in React, PHP, and Python, with a passion for Clean Architecture and robust API design. Proven track record of delivering high-impact code in Agile environments, helping both startups and enterprises scale their digital footprint through technical precision and collaborative problem-solving.

WORK EXPERIENCE

Software Developer - PT Kode Kolektif Indonesia Software Developer – <i>Internship</i>	Yogyakarta, Indonesia Sep 2025 – Dec 2025
- Engineered a robust backend architecture for the company's internal back-office system. - Contributed to a diverse range of projects, seamlessly transitioning between Mobile development and Backend. - Collaborated within a cross-functional Agile team of Backend and Frontend engineers to integrate RESTful APIs, resolving data synchronization issues and optimizing response payloads.	
Bangkit Academy 2024 H2 - Google, Tokopedia, Gojek, & Traveloka Android Developer – <i>Internship</i>	Remote Sep 2024 – Jan 2025
- Developed 10 apps on Native Android using Android Studio and Kotlin as programming language. - Implemented 5+ more Android framework like LiveData, Retrofit, ROOM, etc. - Collaborated with 7 members of a one team with different roles for a final project.	

SKILLS

- HTML - MVC - CSS - Git - JSON	- Javascript - Clean Architecture - PHP - Laravel - Object Oriented Programming	- React.js - Concurrency - Python - Django
---	---	--

PROJECTS

Workable Laravel, PHP, MySQL Client Management System Restful API in for Human Resources	Sept 2025 - Oct 2025
- Built a RESTFUL API using Laravel for Client Management System backend System. - Adopted the Repository Pattern to streamline data handling and ensure a clean, scalable application architecture. - Developed the logic for the Job Creation module, implementing comprehensive form validation to ensure accurate capture of job titles and specifications.	
Travel Recommendation Rest Api Python, Django, SQLite Recommendation System using Content Based Filtering Restful API	May 2025 - June 2025
- Build travel recommendation restful api with machine learning approach - Developed a comprehensive global error handling middleware to intercept and validate malformed user commands, ensuring standardized HTTP responses and system stability. - Leveraged asynchronous programming patterns to manage concurrent data flow, eliminating bottlenecks and improving overall backend.	
Sorting Visualizer React.js, CSS, HTML Algorithm Visualizer using Website	June 2024 - Aug 2024
- Built sorting visualizer website that consists a different sorting algorithm. - Designed a responsive algorithm visualizer featuring customizable controls for execution speed and array size. - Successfully Implementing asynchronous operation to handle every algorithm displayed on the screen.	

EDUCATION

University of Sanata Dharma – Yogyakarta, Indonesia Bachelor Degree in Informatics, GPA: 3.25	Aug 2022 – Jul 2026
Linear Courses: Object Oriented Programming, Query Language, Human Computer Interaction, Basic Programming 1.
